

Product Information Sheet

Product

Vista box

Created specifically for the demands of grocery retail and fast casual operations, Vista is the ideal box for serving hot meals, whether fresh or reheated.

Material

Polypropylene (PP)

Packaging

Inner: Polyethylene (PE)

Outer: Corrugated board box

Area of Use

The boxes can be used safely with all types of foodstuffs, serving cold and hot.

- Microwaveable – Designed for re-heating
- Hot & Cold – Ideal for both hot and cold foods (down to -20°C)
- Leak-proof – Spill-free experience for liquid components
- Safety seal – For extra secure closing
- Hinged lid with tear-off – Easy opening and handling
- Vent-holes – Manually adjustable to release steam
- Antifog lid – Keeps visibility clear for a fresh look
- Colored bottom – Creates an appealing contrast that enhances food presentation
- Recyclable – Made from monomaterial and produced without carbon black

EC Directive 94/62/EC on Packaging and Packaging Waste

The product and its packaging comply with all essential requirements set out in Directive 94/62/EC on packaging and packaging waste, as well as the forthcoming Packaging and Packaging Waste Regulation (PPWR), Regulation (EU) 2025/40.

Environmental Aspects**Product**

The product consists of 100 % virgin PP based on fossil sources.

Made from polypropylene without carbon black. Since carbon black pigments can hinder recyclability, removing them marks a clear improvement and an important step toward more circular resource use

Packaging

Polyethylene is made by refining of mineral oil or natural gas. The polymer consists simply of carbon and hydrogen. The corrugated board box is to a large extent made of recycled fibres.

The corrugated board box is made from wood, which is a renewable resource.

Product Safety

The product fulfils the following:

- Article 3, 11(5), 15 and 17 of Regulation (EC) No 1935/2004 (Framework regulation)
- EU Regulation 2023/2006/EC (GMP - Good Manufacturing Practice)
- EU Regulation 10/2011/EC with amendments (Plastic regulation)
- EU Regulation (EU) 2024/3190 on the use of bisphenol A (BPA) and other bisphenols
- Article 5 of Regulation (EU) 2025/40 on Packaging and Packaging Waste (PPWR) regarding the restriction of per- and polyfluoroalkyl substances (PFAS)
- Duni manufacturing units are certified according to the international quality system ISO 9001. They have also implemented the environmental management system ISO 14001.

End of Life**Recycling**

Collection, sorting and material recovery are all part of the recycling process. Recycling is dependent on local waste handling infrastructure.

PP can be recycled with the same collection and recycling stream as plastic. Ease and recyclability of a product depends on the type of material, composition and sometimes colour. The VISTA range is free from carbon black pigment, which is known to hinder optical sorting. This change significantly enhances recoverability in recycling streams. Check with local waste handling to get the correct information.

Energy Recovery

Incineration facilities for energy recovery are dependent on local infrastructure. Incineration for energy recovery is a good alternative when material recovery is not available by recycling.

Validity

This is issued 2026-01-15. It is revised when there is a change in the manufacturing process, in the product or in legislation.
